Time Series and Data Envelopment Analysis on the Performance Efficiency of DMMMSU-South La Union Campus

Milagros R. Baldeonor
Don Mariano Marcos Memorial State University
Mathematics and Allied Disciplines Department, Philippines

Abstract: This study entitled “Time Series and Data Envelopment Analysis (DEA) on the Performance Efficiency of DMMMSU-South La Union Campus” determined the performance of the Don Mariano Marcos Memorial State University - South La Union Campus, La Union, Philippines, a Level Four state university in the country, vis-à-vis its efficiency along the following performance indicators: Program Requirements, Research, Extension and Production for five (5) academic years 2009-2014. Furthermore, it determined the peer groups and weights of the DMUs (Decision Making Units – the different Colleges and Institutes), the virtual inputs/outputs or potential improvements of the colleges/institutes to be in the efficient frontier, the input and output slacks (input excesses and output shortfalls) needed in the different indicators and the best practices to be considered by the inefficient and weak efficient DMUs. The “best practice” in the frontier is the basis to calculate the adjustments necessary for the DMUs. Different indicators showed varied performance levels in the different academic years but there are best practices from the “efficient” DMUs which could be adapted by the “weak efficient” and “inefficient” ones.

Keywords: Data Envelopment Analysis, Performance Efficiency

1. Introduction

The wave of the times and call on “quality” of higher education rose from the growing diversity of institutions and millennium students; the declining public support are always of positive development. This leads universities and colleges, be it private or public/state, to be conscious and aware of their academic and non-academic activities for quality and effectiveness in the delivery of education through their departments and staff, more sensitive to the ways of strengthening the programs and themselves and be more motivated to act towards the improvement of all their functions.

Institutional autonomy is a necessary measure for a sufficient and effective condition to develop a “culture of excellence”. Culture of excellence embodies a wide range of quality control mechanisms, including internal reviews, through which academic excellence is achieved and sustained. Thus, quality assurance is instituted.

The strategic approach to quality assurance is based on developing the capacity of higher education institutions to design and deliver high quality programs to meet the needs of the country and which achieve standards comparable to those of universities in other countries with which the country competes with (Lindsay, 2012).

The criteria used to assess the quality of work in colleges and universities are closely linked to their varying missions. Institutional missions become more diverse as mass higher education develops. The culture of excellence in a prime teacher-education college or university needs not be keyed to the same criteria of quality used to assess work in leading research universities, and it may be supported by different procedures and mechanisms.

In the Philippines, the higher education system is a key player in the educational and integral formation of professionally competent, service-oriented, principled and productive citizens. It has a tri-fold function of teaching, research and extension services. Through these, it becomes a prime mover of the nation’s socio-economic growth and sustainable development.

The role of a tertiary education institution are varied and viewed in different perspective such as: (1) preservation and transmission of knowledge; (2) operating as a service enterprise that provides instruction, training and services in response to consumer demands; (3) a producer in human resources to satisfy the trained manpower needs of the community; and (4) as an institution that provides instruction, research and public services to its consumers (Lindsay, 2012).

In this regard, the Commission on Higher Education (CHED) is mandated and responsible for formulating and implementing policies, plans and programs for the efficient operation of the system of higher education in the country. It is attached to the Office of the President for Administrative purposes only. It covers both public and private institutions of higher education as well as degree-granting programs in all post-secondary public and private educational institutions.

Missions of the higher educational system are to educate and train Filipinos for enhanced labor productivity and responsible citizenship. This is to institute an environment where educational access is equitable and to inculcate nationalism and patriotism in the hearts and minds of the students and graduates.

Furthermore, the Commission on Higher Education is mandated to accelerate the development of high-level professionals ready to meet international competition and to serve as Centers for Research and Development. The CHED
recognizes the enormous contribution of higher education institutions in the growth and prominence of tertiary education in the country and in the Asia-Pacific.

To improve the quality of instruction delivered by the tertiary education institutions, CHED encourages institutions to seek accreditation and provide a number of incentives in the form of progressive deregulation, grants and subsidies to institutions with accredited programs.

As part of its mandate, CHED monitors and evaluates HEIs in the country through Republic Act 7722. Its purposes are: (a) to make judgment about the effectiveness of the institution and (b) to ensure the quality of standards and programs.

In addition, it has a renewed push for quality assurance particularly: (a) movement to mass higher education; (b) emerging new challenges; (c) workforce has become global and geographically fluid and (d) development of advanced information and communication technologies.

There are different mechanisms of quality assurance. There are program-based like the authority to grant permit/recognition, standards setting, accreditation, international certifications, Center of Development/Excellence and international benchmarking. Institution-based mechanisms include Institutional Quality Assurance Monitoring and Evaluation (IQUAME), SUC leveling, Philippine Quality Award, Autonomous and Deregulated Status of HEIs, PSG for university status and Local Colleges and Universities (http://www.ched.gov.ph).

At the institutional level, CHED has developed the following mechanisms: for State Universities and Colleges Leveling. This has been set to determine the overall performance of the HEIs in different aspects for classification or categorization of institutions accordingly based on the various levels of quality (Defensor, 2010).

Assessing the performance of educational institutions vis-à-vis attainment of their stated objectives is fraught with difficulties. As an alternative measure, the performance of universities has been assessed using a systemic model (input-output processes) concentrating on the means of attaining the objectives through indicators as: outputs of the organization, administrative and technological processes, and the quality and quantity of inputs used. In general, universities are committed to the traditional goals of preserving and transmitting knowledge, extending the frontiers of knowledge and applying knowledge (Poblador, 2008).

Private and public institutions like colleges and universities need to be assessed. Performance indicators have often been criticized for being inadequate and not conducive to analyzing efficiency. The measurement of organizational performance and efficiency is an essential part of the reform for the general welfare of all groups as well as the country. The measure of efficiency is the possible evaluation of the performance of an organization by comparing it with the standards of international best practice (Castano and Cabanda, 2011).

The concepts of institutional performance are the embodying components on two dimensions: effectiveness - is the congruence between outputs and goals or other criteria; and on one hand, efficiency - links outputs with inputs. The efficiency dimension, has been relatively neglected to assess institutional performance, is further defined. Efficiency’s relationship to the economic concepts of productivity is examined. The practical difficulties in assessment related to the conceptualization and measurement of inputs and outputs has to reflect in the educational institution’s purposes and processes. Results are used as management information for action.

Some researches review the progress toward overcoming these difficulties and examine the ways that recent research addresses the analytical problems of assessing the input-output component of institutional performance. Studies of input-output relationships are classified into three categories: (1) input-output-ratio studies, which include the use of cost-analysis techniques and "productivity" ratios; (2) regression studies, which use statistical procedures to estimate the typical relationships among the variables; and (3) production frontier or data envelopment techniques, which identify and explore the most desirable input-output combinations or estimate the feasible range of these combinations (Lindsay, 2012).

2. The Don Mariano Marcos Memorial State University: A Background on Quality

One of the known CHED supervised state university in the Philippines is the Don Mariano Marcos Memorial State University (DMMMSU) in La Union.

Since its existence, DMMMSU has been performing as one of the best state universities in the Philippines. This is reflected in the latest report on the leveling of universities with DMMMSU as one of the top ten (10) Level IV State Universities and Colleges (SUCs) and among the 107 state higher education institutions (Bacungan & Gapasin, 2007).

Recently, an institutional self-evaluation was conducted by a team of evaluators composed of administrators and senior faculty members in the university. The study conducted aimed to determine the performance level of the institution and the significant factors which affected its performance. Specifically, it looked into the performance level of the 16 colleges and institutes along 8 performance indicators namely: program requirements, planning, curriculum and instruction, student development and services, physical plant and facilities, research, extension and resource generation and utilization. The study further aimed to provide direction to planning and to serve as a basis for the improvement of the existing policies and practices of the institution.

The main tool of the study was an instrument developed by a team of evaluators and approved by the University Administrative Council through Resolution No. 35, s. 2007. It made use of 8 performance indicators with sub-indicators and their corresponding points. Secondary data were obtained through interviews, documents and reports of programs and projects. A combination of four designs was used namely:
The main objective of the study is to determine the performance efficiency of the different colleges and institutes of DMMMSU-South La Union Campus along Program Requirements, Research, Extension and Production.

Specifically, based on the different indicators, this study will seek answers to the following questions:

1. What is the efficiency of the different colleges and institutes based on the DEA and Time Series Analysis?
2. What are the peer groups and weights of the DMUs?
3. What are the virtual inputs/outputs or improvements of the DMUs to be in the efficient frontier?
4. What are the input and output slacks needed in the different indicators?
5. Based on the findings, what are the best practices to be considered by the efficient DMUs?

4. Methodology

The study was a documentary analysis that utilized the descriptive evaluative research design considering several entities for evaluation using a non-parametric approach and non-statistical method called Data Envelopment Analysis (DEA) in Decision Making Units (DMUs). DEA is a linear programming based technique for measuring the relative performance of organizational units where the presence of multiple inputs and outputs makes comparisons difficult. This introduces the technique and uses an example to show how relative efficiencies can be determined and targets for inefficient units set. It is also accompanied by Time Series Analysis. It further employed the Output Oriented Multi-Stage DEA Constant Returns-to-Scale (CRS) Model.

Performance efficiency of the DMUs was categorized into three (3): Fully Efficient (blue), Weak Efficient (cyan) and Inefficient (white). Fully efficient DMUs have an efficiency score of 1.000 and they no longer need improvements, weak efficient DMUs on the other hand have efficiency scores of 1.000 but they still need potential improvements to be in the efficient frontier while inefficient ones need a lot of
improvements. Fully efficient DMUs are found in the efficient frontier.

5. Findings

The following were the findings of the study:

(1) The performance efficiency of the campus is as follows:

a. As to Program Requirements, only the College of Education was found to be fully efficient.

<table>
<thead>
<tr>
<th>College/Institute</th>
<th>Efficiency Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>College of Graduate Studies</td>
<td>0.6122</td>
</tr>
<tr>
<td>College of Education</td>
<td>1.0000</td>
</tr>
<tr>
<td>College of Arts and Sciences</td>
<td>0.8571</td>
</tr>
<tr>
<td>Institute of Community Health and Allied Medical Sciences</td>
<td>0.2143</td>
</tr>
<tr>
<td>College of Computer Science</td>
<td>0.4286</td>
</tr>
<tr>
<td>Institute of Agriculture</td>
<td>0.4286</td>
</tr>
<tr>
<td>Institute of Fisheries</td>
<td>0.7143</td>
</tr>
</tbody>
</table>

b. In Research, the campus reflected a fully efficient status in 2009-2010, 2012-2013 and 2013-2014. It was inefficient from 2010-2012.

<table>
<thead>
<tr>
<th>School Years</th>
<th>Efficiency Scores</th>
</tr>
</thead>
<tbody>
<tr>
<td>2009-2010</td>
<td>1.0000</td>
</tr>
<tr>
<td>2010-2011</td>
<td>0.7153</td>
</tr>
<tr>
<td>2011-2012</td>
<td>0.8172</td>
</tr>
<tr>
<td>2012-2013</td>
<td>1.0000</td>
</tr>
<tr>
<td>2013-2014</td>
<td>1.0000</td>
</tr>
</tbody>
</table>

c. In Extension, the campus reflected a fully efficient score in the year 2011-2012 only.

<table>
<thead>
<tr>
<th>School Years</th>
<th>Efficiency Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>2009-2010</td>
<td>0.5544</td>
</tr>
<tr>
<td>2010-2011</td>
<td>0.9819</td>
</tr>
<tr>
<td>2011-2012</td>
<td>1.0000</td>
</tr>
<tr>
<td>2012-2013</td>
<td>0.7703</td>
</tr>
<tr>
<td>2013-2014</td>
<td>0.8229</td>
</tr>
</tbody>
</table>

d. In Production, the campus was fully efficient in the school years 2011-2012 and 2013-2014 and weak efficient in 2012-2013.

<table>
<thead>
<tr>
<th>School Year</th>
<th>Efficiency Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>2011-2012</td>
<td>1.0000</td>
</tr>
<tr>
<td>2012-2013</td>
<td>1.0000</td>
</tr>
<tr>
<td>2013-2014</td>
<td>1.0000</td>
</tr>
</tbody>
</table>

(2) The efficient peer and weight of the inefficient DMUs are:

a. the College of Education for Program Requirements;

<table>
<thead>
<tr>
<th>College of Graduate Studies</th>
<th>7.0000</th>
</tr>
</thead>
<tbody>
<tr>
<td>College of Education</td>
<td>1.0000</td>
</tr>
<tr>
<td>College of Arts and Sciences</td>
<td>1.5000</td>
</tr>
<tr>
<td>Institute of Community Health and Allied Medical Sciences</td>
<td>1.0000</td>
</tr>
<tr>
<td>College of Computer Science</td>
<td>1.0000</td>
</tr>
<tr>
<td>Institute of Agriculture</td>
<td>1.5000</td>
</tr>
<tr>
<td>Institute of Fisheries</td>
<td>0.5000</td>
</tr>
</tbody>
</table>

b. the three school years (2009-2010, 2012-2013, 2013-2014) where the campus was found to be efficient served as the efficient peer and weight of the two years (2010-2012) where the campus was inefficient;

<table>
<thead>
<tr>
<th>School Years</th>
<th>2009-2010</th>
<th>2012-2013</th>
<th>2013-2014</th>
</tr>
</thead>
<tbody>
<tr>
<td>2009-2010</td>
<td>1.0000</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2010-2011</td>
<td>1.3981</td>
<td>0.1165</td>
<td></td>
</tr>
<tr>
<td>2011-2012</td>
<td></td>
<td>0.7500</td>
<td>0.0395</td>
</tr>
<tr>
<td>2012-2013</td>
<td></td>
<td></td>
<td>1.0000</td>
</tr>
<tr>
<td>2013-2014</td>
<td></td>
<td></td>
<td>1.0000</td>
</tr>
</tbody>
</table>

c. the campus extension program was found to be efficient for one year only (2011-2012), hence, it served as the efficient peer and weight of the other four years;

<table>
<thead>
<tr>
<th>School Years</th>
<th>2011-2012</th>
</tr>
</thead>
<tbody>
<tr>
<td>2009-2010</td>
<td>0.6364</td>
</tr>
<tr>
<td>2010-2011</td>
<td>1.3182</td>
</tr>
<tr>
<td>2011-2012</td>
<td>1.0000</td>
</tr>
<tr>
<td>2012-2013</td>
<td>2.3636</td>
</tr>
<tr>
<td>2013-2014</td>
<td>4.0909</td>
</tr>
</tbody>
</table>

d. the efficient peer and weights are the best practices during 2011-2012 and 2013-2014 in Production.

<table>
<thead>
<tr>
<th>School Years</th>
<th>2011-2012</th>
<th>2013-2014</th>
</tr>
</thead>
<tbody>
<tr>
<td>2011-2012</td>
<td>1.0000</td>

<td>1.0000</td>
<td></td>
</tr>
</tbody>
</table>

(3) The virtual inputs/outputs or improvements of the colleges/institutes to be in the efficient frontier (Potential Improvement of the DMUs) are the following:

a. Program Requirements - except for the College of Education, all the other colleges and institutes need potential improvements in the accreditation level.
b. Improvements in the outputs are needed in the school years 2010-2011 and 2011-2012 in Research.

c. Extension - except for 2011-2012, improvements are needed in the number of clientele for the other school years.

4) The input/output slacks were needed only in Research in 2010-2012 particularly in the number of researches presented in different for a. Other indicators do not need input/output slacks. These are the input excesses and output shortfalls.

(5) Based on the findings, the best practices to be considered by the inefficient and weak efficient DMUs are:

a) Program Requirements – The inefficient DMUs need to have all their programs accredited to a higher status.

b) Research – the campus has to improve in the following areas: increase the number of research presentations in different for a and in national and international conferences make quality researches that could win awards and they should publish papers in different refereed journals;

c) Extension – increase the number of clientele/beneficiaries served and lastly,

d) Production – Agoo has to increase its income generated from the different projects.

6. Recommendations

The findings in the study may give impetus to the Commission on Higher Education (CHED) lawmakers or legislators and the university administrators to adopt measures that would be beneficial to the improvement of DMMMSU mandates from its inefficiency. In the light of the different findings, the following are recommended by the researcher:

1. For efficiency, the deans and directors of the 4 Colleges and 3 Institutes should be encouraged to submit their programs for higher accreditation status/level. The faculty and students have to work hard to earn awards in their respective fields of specialization, design and plan programs of completed researches to be presented in research fora (local, regional, national or international) for information dissemination.

2. A broader perspective of Extension is necessary for a greater number of clients is highly recommended.

3. Design and plan for Income Generating Projects in the South La Union Campus to increase the income generated to maintain/sustain the PS and MOOE funds. The efficient college/institute should share their best practices for an optimal operation of a model University.

4. The colleges/institutes are advised to re-assess their virtual Inputs-Outputs (IOs) particularly on the performance indicators to determine targets and percentages of IOs, increase/decrease in the different performance indicators to become efficient in its different mandates/functions.

5. All colleges/institutes of the University should work towards becoming a model in efficiency and for one to be in the efficient frontier. Virtual IOs should be considered and they should adapt the best practices of their efficient peers/references in the different performance indicators to catch up with the aimed efficiency frontier of 1.000.

6. Lastly, future studies may venture on other factors/variables/indicators to test the efficiency of the programs, industries and also the performance of their institutions/organizations.
